## Words to Watch

**account, account for** State reasons for, report on, give an account of, narrate a series of events or transactions.

**analyse** Interpret data to reach conclusions.

**annotate** Add brief notes to a diagram or graph.

**apply** Put to use in a particular situation.

**assess** Make a judgement about the value of something.

**calculate** Find a numerical answer.

**clarify** Make clear or plain.

**classify** Arrange into classes, groups or categories.

**comment** Give a judgement based on a given statement or result of a calculation.

**compare** Estimate, measure or note how things are similar or different.

**construct** Represent or develop in graphical form.

**contrast** Show how things are different or opposite.

**create** Originate or bring into existence.

**deduce** Reach a conclusion from given information.

**define** Give the precise meaning of a word, phrase or physical quantity.

**demonstrate** Show by example.

**derive** Manipulate a mathematical relationship(s) to give a new equation or relationship.

**describe** Give a detailed account.

**design** Produce a plan, simulation or model.

**determine** Find the only possible answer.

**discuss** Talk or write about a topic, taking into account different issues or ideas.

**distinguish** Give differences between two or more different items.

**draw** Represent by means of pencil lines.

**estimate** Find an approximate value for an unknown quantity.

**evaluate** Assess the implications and limitations.

**examine** Inquire into.

**explain** Make something clear or easy to understand.

**extract** Choose relevant and/or appropriate details.

**extrapolate** Infer from what is known.

**hypothesise** Suggest an explanation for a group of facts or phenomena.

**identify** Recognise and name.

**interpret** Draw meaning from.

**investigate** Plan, inquire into and draw conclusions about.

**justify** Support an argument or conclusion.

**label** Add labels to a diagram.

**list** Give a sequence of names or other brief answers.

**measure** Find a value for a quantity.

**outline** Give a brief account or summary.

**plan** Use strategies to develop a series of steps or processes.

**predict** Give an expected result.

**propose** Put forward a plan or suggestion for consideration or action.

**recall** Present remembered ideas, facts or experiences.

**relate** Tell or report about happenings, events or circumstances.

**represent** Use words, images or symbols to convey meaning.

**select** Choose in preference to another or others.

**sequence** Arrange in order.

**show** Give the steps in a calculation or derivation.

**sketch** Make a quick, rough drawing of something.

**solve** Work out the answer to a problem.

**state** Give a specific name, value or other brief answer.

**suggest** Put forward an idea for consideration.

**summarise** Give a brief statement of the main points.

**synthesise** Combine various elements to make a whole.

# Introduction

## What the book includes

This book provides questions and answers for each dot point in the Queensland Certificate of Education syllabus for the Year 12 Physics course:

- Unit 3 Gravity and Electromagnetism
  - Topic 6 Gravity and Motion
  - Topic 7 Electromagnetism
- Unit 4 Revolutions In Modern Physics
  - Topic 8 Special Relativity
  - Topic 9 Quantum Theory
  - Topic 10 The Standard Model

## Format of the book

The book has been formatted in the following way:

### 1.1 Subtopic from syllabus.

#### 1.1.1 Assessment statement from syllabus.

1.1.1.1 First question for this assessment statement.

1.1.1.2 Second question for this assessment statement.

The number of lines provided for each answer gives an indication of how many marks the question might be worth in an examination. As a rough rule, every two lines of answer might be worth 1 mark.

## How to use the book

Completing all questions will provide you with a summary of all the work you need to know from the syllabus. You may have done work in addition to this with your teacher as extension work. Obviously this is not covered, but you may need to know this additional work for your school exams.

When working through the questions, write the answers you have to look up in a different colour to those you know without having to research the work. This will provide you with a quick reference for work needing further revision.

# Unit 3 Gravity and Electromagnetism

| Dot Point                         | Page                                                                                                                                                       | Dot Point              | Page                                                                                                                                                        |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Topic 6 Gravity and Motion</b> |                                                                                                                                                            | 6.6                    | Mandatory practical – Conduct an experiment to determine the horizontal distance travelled by an object projected at various angles from the horizontal. 24 |
| <b>Vectors</b>                    |                                                                                                                                                            | 6.6.1                  | Projectile experiment. 24                                                                                                                                   |
| 6.1                               | Use vector analysis to resolve a vector into two perpendicular components. 4                                                                               | <b>Inclined planes</b> |                                                                                                                                                             |
| 6.1.1                             | Components of vectors. 4                                                                                                                                   | 6.7                    | Solve problems involving force due to gravity (weight) and mass using the mathematical relationship between them. 26                                        |
| 6.2                               | Solve vector problems by resolving vectors into components, adding or subtracting the components and recombining them to determine the resultant vector. 5 | 6.7.1                  | Mass and weight. 26                                                                                                                                         |
| 6.2.1                             | Adding vector components. 5                                                                                                                                | 6.8                    | Define the term normal force. 29                                                                                                                            |
| 6.2.2                             | Adding vectors in two dimensions 1. 6                                                                                                                      | 6.8.1                  | Newton's third law and normal forces. 29                                                                                                                    |
| 6.2.3                             | Subtracting vectors in two dimensions 1. 7                                                                                                                 | 6.9                    | Describe and represent the forces acting on an object on an inclined plane through the use of free-body diagrams. 33                                        |
| 6.2.4                             | Adding vectors in two dimensions 2. 8                                                                                                                      | 6.10                   | Calculate the net force acting on an object on an inclined plane through vector analysis.                                                                   |
| 6.2.5                             | Subtracting vectors in two dimensions 2. 10                                                                                                                | 6.9.1                  | Forces on an inclined plane 1. 33                                                                                                                           |
| 6.2.6                             | Vectors in two dimensions. 12                                                                                                                              | 6.9.2                  | Forces on an inclined plane 2. 36                                                                                                                           |
| <b>Projectile motion</b>          |                                                                                                                                                            | 6.9.3                  | Forces on an inclined plane – analysing an experiment. 38                                                                                                   |
| 6.3                               | Recall that the horizontal and vertical components of a velocity vector are independent of each other. 14                                                  | <b>Circular motion</b> |                                                                                                                                                             |
| 6.4                               | Apply vector analysis to determine horizontal and vertical components of projectile motion.                                                                | 6.11                   | Define the concepts of average speed and period. 39                                                                                                         |
| 6.3.1                             | Components of projectile motion. 14                                                                                                                        | 6.12                   | Solve problems involving average speed of objects undergoing uniform circular motion.                                                                       |
| 6.5                               | Solve problems involving projectile motion. 16                                                                                                             | 6.11.1                 | Uniform circular motion 1. 39                                                                                                                               |
| 6.5.1                             | Projectile motion problems 1. 16                                                                                                                           | 6.11.2                 | Uniform circular motion 2. 40                                                                                                                               |
| 6.5.2                             | Projectile motion problems 2. 18                                                                                                                           |                        |                                                                                                                                                             |
| 6.5.3                             | Analysing projectile motion 1. 22                                                                                                                          |                        |                                                                                                                                                             |
| 6.5.4                             | Analysing projectile motion 2. 23                                                                                                                          |                        |                                                                                                                                                             |

## Unit 3 Gravity and Electromagnetism

| <b>Topic 8 Special Relativity</b> |                                                                                                                                             | 8.9       | Explain paradoxical scenarios such as the twins' paradox. 142                                                                                |
| 8.1                               | Define the terms frame of reference and inertial frame of reference. 126                                                                    | 8.9.1     | The twins' paradox. 142                                                                                                                      |
| 8.1.1                             | Frames of reference and the principle of relativity. 126                                                                                    | 8.10      | Explain the concept of simultaneity. 143                                                                                                     |
| 8.2                               | Recall that motion can only be measured relative to an observer. 129                                                                        | 8.11      | Explain paradoxical scenarios such as flashlights on a train. 143                                                                            |
| 8.2.1                             | Galilean transformations. 129                                                                                                               | 8.10.1    | Simultaneity. 143                                                                                                                            |
| 8.3                               | Recall the consequences of the constant speed of light in a vacuum, e.g. time dilation and length contraction. 132                          | 8.12      | Explain paradoxical scenarios such as the ladder in the barn paradox. 147                                                                    |
| 8.4                               | Recall the two postulates of special relativity. 132                                                                                        | 8.12.1    | The ladder in the barn paradox. 147                                                                                                          |
| 8.3.1                             | Einstein's postulates. 132                                                                                                                  | 8.13      | Describe an example of natural phenomena that cannot be explained by Newtonian physics, such as the presence of muons in the atmosphere. 149 |
| 8.5                               | Define time dilation, proper time interval and relativistic time interval including examples of experimental evidence of the phenomena. 133 | 8.13.1    | Limitations of Newtonian physics. 149                                                                                                        |
| 8.6                               | Solve problems involving time dilation. 133                                                                                                 | 8.13.2    | Another way to look at muons and special relativity. 150                                                                                     |
| 8.5.1                             | Time dilation 1. 133                                                                                                                        | 8.14      | Define rest mass and relativistic momentum including examples of experimental evidence of the phenomena. 152                                 |
| 8.5.2                             | Time dilation 2. 136                                                                                                                        | 8.15      | Explain why no object can travel at the speed of light in a vacuum. 152                                                                      |
| 8.7                               | Define length contraction, proper length and relativistic length including examples of experimental evidence of the phenomena. 138          | 8.16      | Solve problems involving time dilation, length contraction and relativistic momentum. 154                                                    |
| 8.8                               | Solve problems involving length contraction. 138                                                                                            | 8.14.1    | Relativistic mass 1. 152                                                                                                                     |
| 8.7.1                             | Length contraction 1. 138                                                                                                                   | 8.14.2    | Relativistic mass 2. 154                                                                                                                     |
| 8.7.2                             | Length contraction 2. 139                                                                                                                   | 8.14.3    | Relativistic momentum. 155                                                                                                                   |
|                                   |                                                                                                                                             | 8.17      | Recall the mass-energy equivalence relationship. 157                                                                                         |
|                                   |                                                                                                                                             | 8.17.1    | The mass-energy relationship. 157                                                                                                            |

## Unit 4 Revolutions In Modern Physics

### Dot Point

#### SCIENCE AS A HUMAN ENDEAVOUR

The human endeavour subject matter will not be assessed in the external examination, but could be used in the development of claims and questions for a research investigation. Questions are not provided for these topics.

- 8.18** Development of the special theory of relativity: Albert Einstein's work on special relativity built upon the work of scientists such as Maxwell and Lorentz, while subsequent studies by Max Planck, Hermann Minkowski and others led to the development of relativistic theories of gravitation, mass-energy equivalence and quantum field theory.
- 8.19** Ring laser gyroscopes and navigation: Ring laser gyroscopes (RLG) are inertial guidance systems that do not rely on signals from an external source, but from instruments on board a moving object and are used in helicopters, ships, submarines and missiles for accurate navigation.
- 8.20** Nuclear reactors: Special relativity leads to the idea of mass-energy equivalence, which has been applied in nuclear fission reactors.

#### Topic 9 Quantum Theory

- 9.1** Explain how Young's double slit experiment provides evidence for the wave model of light. 160
- 9.2.1** Diffraction. 160
- 9.1.2** Young's double slit experiment. 161
- 9.2** Describe light as an electromagnetic wave produced by an oscillating electric charge that produces mutually perpendicular oscillating electric fields and magnetic fields. 164
- 9.2.1** The electromagnetic wave theory of light. 164
- 9.3** Explain the concept of black body radiation. 167
- 9.4** Identify that black body radiation provides evidence that electromagnetic radiation is quantised into discrete values.
- 9.5** Recall that photons exhibit the characteristics of both waves and particles.
- 9.3.1** Max Planck – the beginning of quantum theory. 167
- 9.6** Describe the concept of a photon. 171
- 9.7** Describe the photoelectric effect in terms of the photon.
- 9.8** Define the terms threshold frequency, Planck's constant and work function.
- 9.9** Describe wave-particle duality of light by identifying evidence that supports the wave characteristics of light and evidence that supports the particle characteristics of light.
- 9.6.1** Albert Einstein and the photoelectric effect. 171
- 9.6.2** Quantum theory and the photoelectric effect. 174

| 9.12      | Mandatory practical – Conduct an experiment (or use a simulation) to investigate the photoelectric effect. Data such as the photoelectron energy or velocity, or electrical potential difference across the anode and cathode, can be compared with the wavelength or frequency of incident light. Calculation of work functions and Planck’s constant using the data would also be appropriate. | 189  | SCIENCE AS A HUMAN ENDEAVOUR<br>The human endeavour subject matter will not be assessed in the external examination, but could be used in the development of claims and questions for a research investigation. Questions are not provided for these topics. |                                                                                                                                                                                                                                                                                                                                             |      |
| 9.12.1    | Analysing experimental data 1.                                                                                                                                                                                                                                                                                                                                                                   | 189  | 9.17                                                                                                                                                                                                                                                         | You could explore the historical development of the model of the atom in terms of traditional models (e.g. Democritus, Dalton, Brownian motion, Thomson, Rutherford and Bohr).                                                                                                                                                              | 9.18 |
| 9.12.2    | Analysing experimental data 2.                                                                                                                                                                                                                                                                                                                                                                   | 191  |                                                                                                                                                                                                                                                              | You could research how theories are contested, refined or replaced when new evidence challenges them, or when a new model or theory has greater explanatory power, for example, how can the approximation of Earth as a black body be used to predict climate patterns or what are the problems scientists face in validating their models. |      |
| 9.12.3    | Analysing experimental data 3.                                                                                                                                                                                                                                                                                                                                                                   | 193  |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                             |      |
| 9.13      | Describe Rutherford’s model of the atom including its limitations.                                                                                                                                                                                                                                                                                                                               | 195  |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                             |      |
| 9.13.1    | Atomic spectra.                                                                                                                                                                                                                                                                                                                                                                                  | 195  | 9.19                                                                                                                                                                                                                                                         | Development of the quantum model: How can the quantum mechanical model of the atom, developed from work by Rutherford, Bohr, Planck and Einstein, is required to explain many observations made about atoms.                                                                                                                                |      |
| 9.13.2    | The hydrogen spectrum.                                                                                                                                                                                                                                                                                                                                                                           | 197  |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                             |      |
| 9.13.3    | Rutherford’s model and its limitations.                                                                                                                                                                                                                                                                                                                                                          | 198  |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                             |      |
| 9.14      | Describe the Bohr model of the atom and how it addresses the limitations of Rutherford’s model.                                                                                                                                                                                                                                                                                                  | 200  | 9.20                                                                                                                                                                                                                                                         | Black body radiation and the greenhouse effect: How do models of Earth’s energy balance using the concept of black body radiation enable scientists to monitor changes in global temperature, assess the evidence for changes in climate due to the enhanced greenhouse effect and evaluate the risk posed by anthropogenic climate change? |      |

# DOT POINT

## Unit 3

### Gravity and Electromagnetism

In this unit you will:

- ⦿ Investigate motion and its causes by using Newton's laws of motion and the gravitational field model.
- ⦿ Analyse motion on inclined planes and the motion of projectiles and satellites.
- ⦿ Explore the technologies behind artificial satellites and modern communication systems.
- ⦿ Develop an understanding of electrical power generation and distribution systems.
- ⦿ Learn about field theories of gravity and electromagnetism.
- ⦿ Examine the production of electromagnetic waves.

# DOT POINT

## TOPIC 6

### Gravity and Motion

In this topic you will:

- ⦿ Solve vector problems by resolving vectors into components and determining the resultant vector.
- ⦿ Use vector analysis to solve problems involving projectile motion.
- ⦿ Calculate the net force acting on an object on an inclined plane.
- ⦿ Examine uniform circular motion and solve problems involving average speed of objects undergoing uniform circular motion.
- ⦿ Investigate gravitational force and fields.
- ⦿ Explore orbits and solve problems involving Kepler's third law.

## 6.1 Use vector analysis to resolve a vector into two perpendicular components.

### 6.1.1 Components of vectors.

6.1.1.1 Calculate the missing values in the table.

| Vector | Magnitude | Angle of inclination from horizontal | Horizontal component | Vertical component |
|--------|-----------|--------------------------------------|----------------------|--------------------|
| 1      | 90        | 50                                   | A =                  | B =                |
| 2      | 40        | 65                                   | C =                  | D =                |
| 3      | E =       | 35                                   | 30                   | F =                |
| 4      | G =       | H =                                  | 40                   | 60                 |
| 5      | 135       | I =                                  | J =                  | 75                 |

6.1.1.2 Find the horizontal and vertical components of each of the following vectors. All vectors are drawn to a scale where 1 cm = 10 m.

(a)

(b)

(c)

(d)

(e)

(f)

## 6.2 Solve vector problems by resolving vectors into components, adding or subtracting the components and recombining them to determine the resultant vector.

### 6.2.1 Adding vector components.

6.2.1.1 The boxes show several pair of perpendicular vector components. Sketch vector diagrams to combine them to find the resultant vectors.

|                                                                  |                                                                    |
|------------------------------------------------------------------|--------------------------------------------------------------------|
| (a) Horizontal component = 38 m E<br>Vertical component = 56 m N | (b) Horizontal component = 32 m W<br>Vertical component = 26 m S   |
| (c) Horizontal component = 50 m E<br>Vertical component = 40 m N | (d) Horizontal component = 50 m W<br>Vertical component = 10 m S   |
| (e) Horizontal component = 36 m E<br>Vertical component = 48 m S | (f) Horizontal component = 120 m E<br>Vertical component = 130 m N |

6.2.2 Adding vectors in two dimensions 1.

6.2.2.1 Vector X is 12 N right, vector Y is 8 N right, and vector Z is 17 N right. What is:

- (a)  $X + Y$ ? .....
- (b)  $Y + Z$ ? .....
- (c)  $X + Z$ ? .....
- (d)  $X + Y + Z$ ? .....

6.2.2.2 The diagram shows several displacement vectors. Use them to answer the questions below them. The vectors have been drawn to a scale where 1 cm = 10 m.

Find the resultant for each of the following.

|     |                 |  |
|-----|-----------------|--|
| (a) | $A + B$         |  |
| (b) | $B + C$         |  |
| (c) | $B + D$         |  |
| (d) | $A + D$         |  |
| (e) | $A + B + C$     |  |
| (f) | $B + C + D$     |  |
| (g) | $A + C + D$     |  |
| (h) | $A + B + C + D$ |  |
| (i) | $E + F$         |  |
| (j) | $F + G$         |  |
| (k) | $E + G$         |  |
| (l) | $E + F + G$     |  |

### 6.2.3 Subtracting vectors in two dimensions 1.

**6.2.3.1** Vector X is 12 N right, vector Y is 8 N right, and vector Z is 17 N right. What is:

- (a)  $X - Y$ ? .....
- (b)  $Y - Z$ ? .....
- (c)  $X - Z$ ? .....
- (d)  $X - Y - Z$ ? .....

**6.2.3.2** The diagram shows several displacement vectors. Use them to answer the questions below them. The vectors have been drawn to a scale where 1 cm = 10 m.

Find the resultant for each of the following.

- |     |                 |  |
|-----|-----------------|--|
| (a) | $A - B$         |  |
| (b) | $B - C$         |  |
| (c) | $B - D$         |  |
| (d) | $A - D$         |  |
| (e) | $A - B - C$     |  |
| (f) | $B - C - D$     |  |
| (g) | $A - C - D$     |  |
| (h) | $A - B - C - D$ |  |
| (i) | $E - F$         |  |
| (j) | $F - G$         |  |
| (k) | $E - G$         |  |
| (l) | $E - F - G$     |  |

6.2.4 Adding vectors in two dimensions 2.

6.2.4.1 The diagram shows two vectors, P and Q.

Which choice best shows the vector addition  $P + Q$ ?

6.2.4.2 Vector X is 500 m south. Vector Y is 200 m east. Vector Z is 400 m north east. What is  $X + Y + Z$ ?

.....  
.....  
.....  
.....  
.....  
.....  
.....

6.2.4.3 The diagram shows two vectors, X and Y.

Which choice best shows vector  $Z = \text{vector } X + \text{vector } Y$ ?
