CONTENTS

Introduction	1	28	Changing Data Into Other Forms	44
1 Branches Of Science	2	29	Reading a Graph 1	45
2 Safety In a Laboratory	4	30	Reading a Graph 2	46
3 Measurement In Science – Comprehension	6	31	Reading a Graph 3	47
4 Match Up! – Comprehension	8	32	Reading a Graph 4	48
5 Reading Scales – Temperature	9	33	Processing and Analysing Results 1	49
6 Reading Scales	10	34	Processing and Analysing Results 2	50
7 Why Are Corners So Hot?	12	35	Analysing an Experiment	51
8 Reading Scales – Length	13	36	Logical Thinking Puzzles 1	52
9 Reading Scales – Volume	14	37	Logical Thinking Puzzles 2	53
10 Reading Scales – A Class Experiment	15	38	Qualitative and Quantitative Statements	55
11 What Is An Astronomical Unit?	16	39	Making Inferences 1	56
12 World's Tallest Buildings – Scale Diagrams	17	40	Making Inferences 2	57
13 Converting Units Of Measurement	18	41	Making Inferences 3	58
14 Why Are Maths Books Sad? – Converting Units	19	42	Scale Diagrams	61
15 What Is Science? – Matching Sentence Halves	20	43	Ideas About Classification – Close Sentences	64
16 The Scientific Method – Sequencing Statements	22	44	Developing Classification Schemes	66
17 Observation Or Hypothesis?	24	45	Designing Dichotomous Keys	67
18 Pasteur and Pasteurisation	27	46	Classification Of Living Things – Comprehension	68
19 Experimental Variables	28	47	Phylum Echinodermata – Pictorial Comprehension	70
20 Designing Experiments	30	48	Why Do We Need To Classify? – Comprehension	72
21 Accuracy In Measurements	32	49	Classifying the Vertebrates – Comprehension	74
22 Reliability Of Measurements	34	50	Facts About Chains And Webs – Definition Of Terms	76
23 Validity Of Experiments	36	51	Food Chain, Pyramid, Web Crossword	78
24 Terms Used In Experiments – Research	38	52	Analysing a Food Web	80
25 Identifying Scientific Equipment	40	53	Food Chain and Pyramid	82
26 Using a Microscope – Comprehension	41	54	Feral Animals In Australia – Comprehension	84
27 The Bunsen Burner – Comprehension	42			

55	Mixtures and Solutions – Definition Of Terms	86	84	Other Forms Of Energy 2 – Comprehension	136
56	Qualitative and Quantitative Concentrations	87	85	Electromagnetic Energy – Comprehension	138
57	Making Inferences	88	86	Classifying Energy – Flow Diagram	140
58	Solutions Crossword	90	87	Energy Throughout Time – Analysing a Graph	141
59	Analysing an Experiment	92	88	Analysing a Heat Energy Experiment 1	142
60	Applying Two Theories	94	89	Analysing a Heat Energy Experiment 2	143
61	Concentrations Of Solutions – Calculations	95	90	Analysing a Heat Energy Experiment 3	144
62	The States Of Matter	96	91	Energy Changes – Comprehension	146
63	Predicting Results Of Simple Experiments	98	92	The Law Of Conservation Of Energy	148
64	Water Cycle – Research Assignment	100	93	Applying Ideas About Heat Transfer	150
65	Saving Water – Interpreting a Bar Chart	101	94	The Earth Is Tilted! – Analysis	152
66	The Kinetic Theory Of Matter – Language Connections	102	95	What Season Is That? – Analysis	153
67	Analysing an Experiment	105	96	The Solar System	154
68	Matter and the Kinetic Theory	106	97	Facts About the Solar System – Research	155
69	Applying the Kinetic Theory	108	98	Relative Sizes Of the Planets – Scale Diagrams	156
70	Changes Of State – Comprehension	110	99	Mass, Weight and Gravity	158
71	Changes Of State – Close Diagram	112	100	Your Weight On Each Planet – Calculating and Graphing	160
72	Properties Of Matter Crossword	114	101	Relative Masses – Calculating and Graphing	162
73	Atoms and Molecules – Comprehension	116	102	Eclipses – Analysis	164
74	Elements – Transforming Data	118	103	Phases In the Solar System – Analysis	166
75	More About Atoms – Comprehension	120	104	When Is a Year Not a Year? – Analysing a Diagram	168
76	Elements and Their Symbols	122	105	Types Of Forces	170
77	Applying Atomic Structure Theory 1	124		Answers	172
78	Applying Atomic Structure Theory 2	126		Words to Watch	214
79	Heat Conduction – Comprehension	128		Periodic Table	215
80	Heat Convection – Comprehension	130		Index	216
81	Heat Radiation – Comprehension	132			
82	Designing an Experiment	133			
83	Other Forms Of Energy 1 – Comprehension	134			

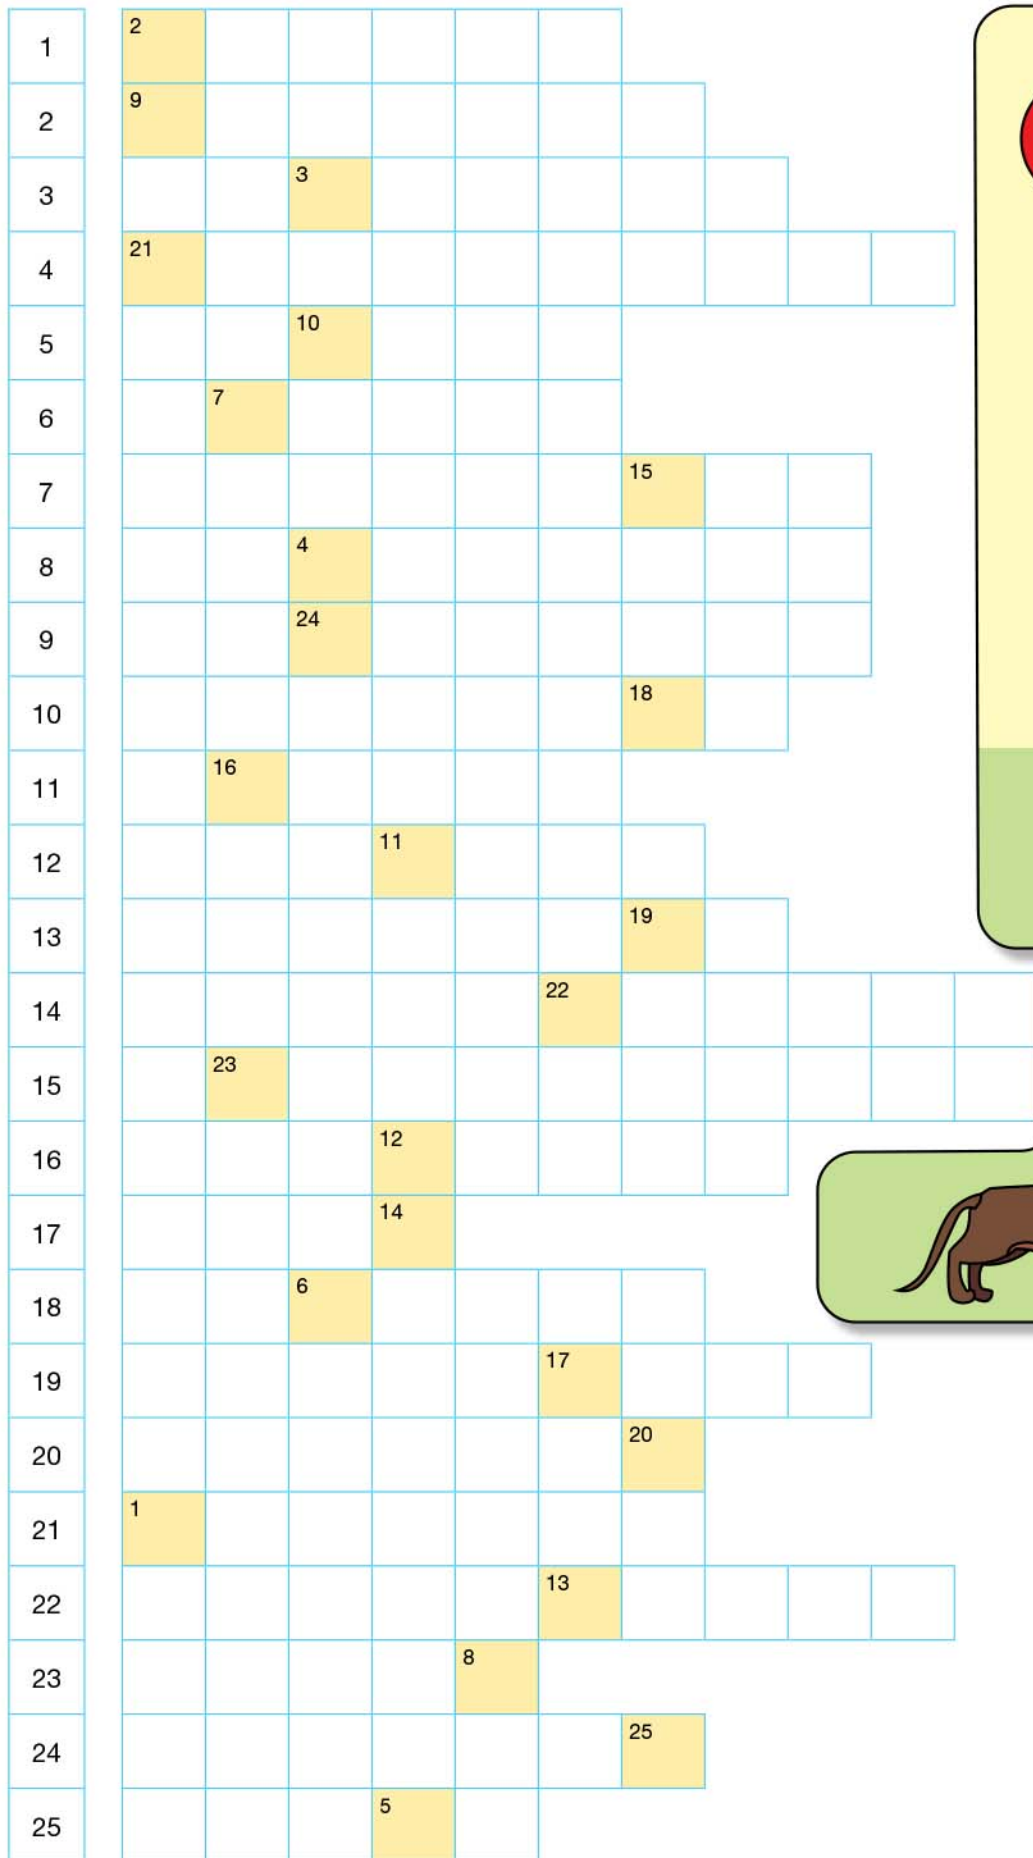

Hi!

In this bumper book packed full of fun science activities, you'll:

- *Develop some really useful basic skills and knowledge that will help you in everyday life.*
- *Find your confidence growing as you juggle numbers, new words and science ideas.*
- *Discover interesting new facts through learning how, why and when to do things.*
- *Tackle new information and react critically to it because of all the new things you have learnt.*
- *Be able to check your progress and understanding with the detailed answers at the back of the book.*

EXERCISE
2

Safety In a Laboratory

The 10 cartoons below each illustrate a laboratory safety rule. Your task is to identify the rule each refers to and to write the rule in the appropriate space in the table.

1.

2.

3.

4.

5.

'SCUSE ME
MISS !!

6.

7.

MOTHERS
COOKING WAS
NEVER SO
BAD !!

8.

AAARGH !!

9.

10.

Measurement In Science – Comprehension

Read the information below then answer the questions which follow it.

One of the ways in which science differs from other subjects is that many of the observations we make involve measuring something. We might measure the length of something, a volume, a time, mass, temperature, electrical current or voltage or the force acting on something, or many other quantities that you will meet in your science studies.

To measure something, we need two things:

1. A system of units.
2. A measuring instrument.

The units we use tell others what the measurement is. It might be a distance (metres or kilometres) or a volume (litres) or a period of time (seconds). Each different quantity we measure will have its own system of units, for example as follows.

The system we use for distance includes:

The kilometre (km) Where 1 km = 1000 m

The metre (m) 1 m = 100 cm

The centimetre (cm) 1 cm = 10 mm

The millimetre (mm)

These units, and all the others we will use, are based on the **metric system of measurement**, derived in France in 1795. The metric system is used internationally and is sometimes referred to as the SI (Système Internationale) system of units.

There are many advantages of having a universal system throughout the world. It makes communicating in all areas involving measurement, including engineering, architecture, medicine, banking, buying and selling much easier to understand.

Another important idea about a system of units is having a standard. A standard has three main properties. It is:

- Convenient to use.
- Easily reproduced.
- Widely known.

The standard metric units used for mass, length and time, the three fundamental quantities in science, from which all others are derived are shown in the table below.

Fundamental quantity	Standard metric unit	Symbol for unit
Mass	kilogram	kg
Length	metre	m
Time	second	s

An example of a derived unit is the unit for speed – how fast something is moving. It is the metre per second, usually written as m s^{-1} .

QUESTIONS

1. Fill in the missing words in the sentences below.

- (a) Science is different from other subjects it often involves making .
- (b) To measure something we need a of and a instrument.
- (c) The system of units we use is the system.
- (d) The units for mass, length and in the system are , and seconds respectively.
- (e) The symbols we use for these units, in the same order are , , .

2. What are the three characteristics of a standard unit?

3. What is the main advantage of having a standard, or universal system of measurement?

4. Complete the following table.

To change	into	\times or \div	by
kilometres	metres		
metres	centimetres		
centimetres	millimetres		
	centimetres	\div	10
millimetres		\div	1000
centimetres		\div	100
	kilometres	\div	1000
	kilometres	\div	1 000 000
litres	millilitres		
	litres	\div	1000
gram	kilogram		
milligram	gram		
gram		\times	1000
kilogram		\times	1000

EXERCISE
5

Reading Scales – Temperature

Determine the reading on each of the thermometers shown below to the closest degree.

A =

B =

C =

D =

E =

F =

G =

H =

I =

J =

ANSWERS

1 Branches Of Science

1. Heart
2. Physics
3. Pharmacy
4. Seismology
5. Plants
6. Nerves
7. Chemistry
8. Lithology
9. Radiology
10. Hydrology
11. Botany
12. Ecology
13. Virology
14. Climatology
15. Vulcanology
16. Minerals
17. Skin
18. Zoology
19. Cosmology
20. Biology
21. Weather
22. Entomology
23. Cells
24. Geology
25. Birds

Final question: What does paleontology study?

Answer: Paleontology is the study of fossils.

2 Safety In a Laboratory

1. Don't taste or drink in the laboratory – it might be poisonous.
2. Clean up any spilt chemical immediately with the cloth provided by the teacher.
3. Watch where you walk about so you do not bump into others.
4. Clean all apparatus before putting it away.
5. If any chemicals spill anywhere, notify the teacher immediately.
6. Do not directly smell chemicals or gases given off during reactions.
7. Never leave reagent bottles unstoppered.
8. Do not touch chemicals directly.
9. Do not mix unauthorised chemicals – they may react in a bad way!
10. Don't run in the laboratory – walk sensibly.

3 Measurement In Science – Comprehension

1. (a) because, measurements
(b) system, units, measuring
(c) metric
(d) time, metric, kilogram, metre
(e) kg, m, s
2. Convenient to use.
Easily reproduced.
Widely known.
3. Communication and understanding across the world in all areas of interaction are easier.
